

CDC is caught fraudulently altering Death Certificates to hide COVID Vaccine Deaths

The Expose

An investigation of official death certificates has found that the Centers for Disease Control (CDC) has been committing fraud by refusing to assign the correct International Classification of Diseases code for Covid-19 vaccine side effects as the cause of death when they should have done so.

In other words, the CDC is actively engaging in a huge cover up of deaths due to Covid-19 vaccination.

Background

When someone dies, there is a death certificate that is filled out for official/legal purposes. Death certificates contain a lot of information (some states include more than others), including the causes of death (CoD).

Causes of death refer to the medical conditions that ultimately played some role in the demise of the decedent. To qualify as a CoD, a condition only needs to contribute to the medical decline of the decedent in some way, but doesn't have to be directly responsible for whatever ultimately killed the person. If someone had high blood pressure, and subsequently suffered a heart attack that led to cardiac arrest which killed them, all three conditions qualify as CoD. On the other hand, this unfortunate fellow's ingrown toenail is not a cause of death, because it in no way contributed to their demise.

This is from the CDC's own guidance explaining how to properly fill out CoD's on a death certificate (you don't need to understand the difference between Cause A, B, etc for this article):

The critical thing to keep in mind is that the person filling out the death certificate writes a text description of the CoD's, but doesn't assign the ICD 10 codes for the CoD's.

That's the CDC's job.

ICD 10 Coding System for CoD's

There is a fancy coding system that is used to classify the many thousands of medical conditions that can play a role in death known as the International Classification of Diseases. Every few years, it is updated/revised to keep up with new medical (or bureaucratic) developments, as new conditions are discovered and old conditions are reorganized or reclassified.

The current iteration of the ICD that was used for the deaths we're looking at is the ICD 10 (that's the 10th version). It is basically a hierarchical classification system:

There are codes for practically every random weird thing you can think of:

These are categories themselves – a code can go as 7 characters long:

Source

ICD 10 Codes for Covid Vaccine Side Effects

There are two ICD 10 codes for vaccine side effects that can be broadly used for the covid vaccines – T88.1 and Y59.0:

T88.1 – *Other complications following immunization, not elsewhere classified.*

Y59.0 – *Viral vaccines*

(There are other ICD 10 codes for various specific complications or side effects of vaccines, but the point remains that an ICD 10 code for vaccine side effects exists.)

CDC – Centers for Data Concealment

The CDC receives the death certificates from the various states and applies ICD 10 codes. This is primarily done with a secret algorithm, with a tiny percentage of cases adjudicated by CDC staff when the algorithm is unable to confidently assign an ICD

code to the text description written on the actual death certificate (such as confounding spelling or a text description that does not make much sense). I confirmed this with a biostatistician who works for a DoH in a US state (I'm leaving out which one because I want to preserve my persona grata status). The individual who obtained the MN death certificates likewise confirmed with state officials that the ICD codes in their data were assigned by the CDC.

What a death certificate identifying a covid vaccine as a CoD **should look like**

There are three death certificates in the MN tranche that contain either T88.1 or Y59.0. One is for a flu vaccine reaction, and – surprisingly – the other two are for a covid vaccine.

Note – when used below:

UCoD (Underlying Cause of Death) refers to “the disease or injury that initiated the train of events leading directly to death, or the circumstances of the accident or violence which produced the fatal injury.”

MCoD (Multiple Causes of Death) refers to “the immediate cause of death and all other intermediate and contributory conditions listed on the death certificate.” (everything else)

The first death certificate contains a covid vaccine ICD (below), and it looks like the CDC was trapped and could not avoid putting it on without fundamentally rewriting the death certificate, because the vaccine complication is unambiguously listed as the UCoD (this death certificate is saying the person was killed by a heart attack caused by the covid vaccine within minutes of injection):

The second death certificate the CDC deigned to assign a vaccine ICD (and not only one but **BOTH** vaccine ICD codes(!)) feels like perhaps a rogue CDC employee was working that day and snuck it in:

In any event, as we can clearly see, both T88.1 and Y59.0 are indeed appropriate for when a covid vaccine is listed as a CoD. Thus the CDC cannot claim that there was no official ICD 10 code that could be used to designate covid vaccines (or any other excuse).

The FRAUD:

With that introduction, below are 7 death certificates from Minnesota that identify a covid vaccine as a cause of death where the CDC omitted the corresponding ICD 10 code identifying a vaccine side effect when the CDC assigned ICD codes to the death certificates.

The first fraudulently filled out death certificate offers a crucial detail highlighting not only the fraud but the naked double standards for assigning CoD's.

This death certificate identifies both a covid vaccine and covid itself as contributory CoD's (in the last row highlighted in yellow, vaccine underlined in green, covid in blue):

- "covid vaccine second dose 10 hrs prior to death"
- "history of covid infection in May 2020" (about 7-8 months prior to death)

Any remotely objective person would presume that if a condition that occurred 7 months prior without any clear link to the actual death still nevertheless meets the standard for being identified as a CoD, then surely a condition or event that occurred a mere TEN HOURS before death *identified by the doctor filling out the death certificate* merits inclusion as a CoD.

Yet, the CDC assigned U70.1 – "COVID-19, virus identified" – for covid, but neglected to assign T88.1 or Y59.0 for the covid vaccine.

A second point to highlight is that we see that anything mentioned as a CoD, even in the context of "history of" that had (presumably) been long resolved, is a legitimate CoD insofar as assigning an ICD 10 code and epidemiological data are concerned.

DEATH CERTIFICATE FRAUD #2	
Certificate ID:	2021-MN-0 [REDACTED]
Death Date:	2/24/2021
Age (Years):	77
Sex:	F
Marital Status:	WIDOWED (AND NOT REMARRIED)
Place of Death:	HOSPITAL - INPATIENT
UCoD	G931
MCoD	C509; I469; J960; R570
Cause A	ANOXIC ENCEPHALOPATHY
Time Cause A to Death	1 DAY
Cause B	ACUTE RESPIRATORY FAILURE
Time Cause B to Death	1 DAY
Cause C	CARDIOGENIC SHOCK
Time Cause C to Death	1 DAY
Cause D	OUT OF HOSPITAL CARDIAC ARREST FOR UNCLEAR REASONS
Time Cause D to Death	1 DAY
Other Causes	VACCINE THE DAY BEFORE HER CARDIAC ARREST. THE CASE WAS REPORTED TO THE CDC, THOUGH IT'S NOT CLEAR AS TO ANY MECHANISM FOR HOW THE VACCINE COULD HAVE LED TO THE CARDIAC ARREST

This decedent suffered a cardiac arrest that ultimately led to her death *ONE DAY* after being vaccinated.

(For the record, I am not bothered by the “though it’s not clear as to any mechanism for how the vaccine could have led to the cardiac arrest” line. This death occurred February 24, 2021 – well before there was any sort of public awareness about the multiple plausible mechanisms by which the vaccine could cause heart damage. So to me, whoever filled out the death certificate was a gutsy fellow willing to identify a covid vaccine on a death certificate that had his name on it.)

Fraudulent Death Certificate #3

This death certificate doesn't merely identify a covid vaccine, it explains that the decedent "felt sick after the vaccine" and died 4 days later from a heart attack. Yet, no T88.1 or Y59.0.

This death certificate provides that the decedent received her second dose of Pfizer 18 days prior to her death.

Here we have a 65-year-old male who was killed by a heart attack 12 days after getting vaccinated.

This case is especially noteworthy. Someone involved with this death informed me that the family had to pressure the coroner to put the recent covid booster on the death certificate. A family member also filed a VAERS report themselves, after the patient's doctors declined to do so.

Furthermore, the CDC applied W34 as the UCoD. What is W34 for?

'accidental discharge and malfunction from other and unspecified firearms and guns.'

There is no mention of any firearms mishaps on the death certificate.

One would have to wonder how such an errant code came to be, especially on a death certificate that contains other ICD 10 shenanigans. It is unlikely that 'Y590' or 'T881' would be 'misspelled' or algorithmically mixed up with 'W34.'

Perhaps if there were no other instances of fraudulent omission of vaccine ICD codes on other death certificates, and the CDC wasn't in the habit of routinely assigning U07.1 for a covid infection that resolved a year ago, the failure to include T88.1 or Y59.0 here could be excused.

At minimum, this death certificate should contain T88.0 – 'Infection following immunization' – to document the breakthrough infection (which is a subject for a separate article as this seems to be fairly widespread).

Additional Observations

The following table shows the date of death and age for all 9 death certificates shown above that identified a covid vaccine as a CoD:

It is striking that 7/9 died before May 2021. This is odd – if anything, the deaths should skew later, not earlier. Vaccine adverse events were denied – with maximum prejudice and then some – for many months before the medical mainstream has finally (begrudgingly) started to acknowledge that the covid vaccines can trigger potentially lethal pathologies (in exceedingly rare instances to be sure).

The clustering of death certificates mentioning a covid vaccine at the beginning of the rollout suggests that 'administrative' interference likely played a role in discouraging coroners from mentioning a covid vaccine on death certificates.

Another noteworthy tidbit here is the age of the decedents: every single one is a senior citizen, and the average age of the decedents is 80. This is important to highlight because whereas young people "dying suddenly" stands out, there has been much less attention or acknowledgement of the covid vaccine's devastating toll upon the old and frail, where deaths – even those that occur in close proximity to vaccination – are readily attributed to prior health conditions.

Finally, the actions of the CDC call into question whether the CDC is altogether qualified or trustworthy enough to be the steward of the nation's epidemiological data. The CDC manages many of the datasets that underpin whole fields of study. If the

CDC is willing to fraudulently alter data (or even if the CDC is just too incompetent to avoid corrupting data), all data under the aegis of the CDC is potentially suspect, especially if it relates to a controversial political or social issue. The implications of this are disturbing, to say the least.
